Edition: 2021-01 Replaces: 2020-03

# rexroth A Bosch Company

# Check valve, pilot operated

# Type Z2S

- ▶ Size 10
- ► Component series 3X
- ▶ Maximum operating pressure 350 bar
- ► Maximum flow 160 l/min

#### **Features**

- ► Sandwich plate valve for use in vertical stackings
- ► Porting pattern according to ISO 4401-05-04-0-05, ISO 4401-05-05-0-05 and NFPA T3.5.1 R2-2002 D05
- ► For the leakage-free blocking of one or two actuator ports, optional
- ► Various cracking pressures
- ► With pre-opening (standard); without pre-opening (optional)
- ▶ Check valve installation sets available individually
- ► Special versions upon request

With version "SO150", ports X and Y are already in place. (No ordering code required)

11 Further details in the plain text

# **Symbols** (1) = component side, 2) = plate side)

Notice:
Deviating from ISO 4401, port T is called TA and port T1 is called TB in this data sheet.

#### Function, sections, circuit example

The isolator valve type Z2S is a releasable check valve in sandwich plate design.

It is used for the leakage-free blocking of one or two actuator ports, even for long standstill times.

In direction A① to A② or B① to B②, there is a free flow; in the opposite direction, the flow is blocked.

If, for example, there is a flow through the valve in direction A① to A②, the control spool (1) is moved in the direction of the B side, opens the ball seat valve (2) and then pushes the poppet (3) off its seat. Hydraulic fluid can now flow from B② to B①.

In order to allow the ball seat valve (2) to be safely closed, the control spool (1) must be hydraulically unloaded (see circuit example).

Due to the pre-opening, there is a damped decompression of the pressurized liquid. Thus, possible switching shocks are avoided.

#### **Pre-opening**

- ► The two-stage set-up with an increased control open ratio means even low pilot pressure can be unloaded securely.
- ► Avoidance of switching shocks due to dampened decompression of the pressure volume on the actuator side.

Circuit example, schematic

Type Z2S 10 A...

- $\bigcirc$  = component side
- 2 = plate side
- 1 Control spool, area **A**<sub>2</sub>
- 2 Ball, area A<sub>3</sub>
- 4 Poppet, area A<sub>1</sub>
- **5** Stop

#### Motice:

Deviating from ISO 4401, port T is called TA and port T1 is called TB in this data sheet.

# **Function, sections**

- 1 = component side
- ② = plate side
- 1 Control spool, area  $\mathbf{A}_2$
- **2** Ball, area **A**<sub>3</sub>
- 4 Poppet, area A<sub>1</sub>
- **5** Stop
- 6 Control spool, area A<sub>4</sub>

#### M Notices:

- ▶ In valves without pre-opening, sudden unloading of pent-up pressure volume may occur. Resulting switching shocks may lead to premature wear on installed components, as well as noise formation.
- ▶ Deviating from ISO 4401, port T is called TA and port T1 is called TB in this data sheet.

#### **Technical data**

(For applications outside these values, please consult us!)

#### Important information on hydraulic fluids:

- ► For further information and data on the use of other hydraulic fluids, please refer to the data sheets above or contact us.
- ► There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.).
- ► The ignition temperature of the hydraulic fluid used must be 50 K higher than the maximum surface temperature.
- ▶ Bio-degradable and flame-resistant containing water: If components with galvanic zinc coating (e.g. version "J3" or "J5") or parts containing zinc are used, small amounts of dissolved zinc may get into the hydraulic system and cause accelerated aging of the hydraulic fluid. Zinc soap may form as a chemical reaction product, which may clog filters, nozzles and solenoid valves particularly in connection with local heat input.

#### ► Flame-resistant – containing water:

Due to the increased cavitation tendency with HFC hydraulic fluids, the life cycle of the component may be reduced by up to 30% as compared to the use with mineral oil HLP. In order to reduce the cavitation effect, it is recommended - if possible specific to the installation - to back up the return flow pressure in ports T to approx. 20% of the pressure differential at the component.

The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and simultaneously increases the life cycle of the components. For the selection of filters, see www.boschrexroth.com/filter.

# **Characteristic curves:** Without spool position monitoring (measured with HLP46, $\vartheta_{oil}$ = 40 ±5 °C, averages)

#### Δp-q<sub>V</sub> characteristic curves

#### Cracking pressure:

- **1** 1.5 bar
- **2** 3 bar
- **3** 6 bar
- **4** 10 bar
- 5 Check valve controlled open via control spool
- 6 Free flow (without check valve use), version "A" and "B"

**Characteristic curves:** With spool position monitoring (measured with HLP46,  $\vartheta_{oil}$  = 40 ±5 °C, averages)

#### Cracking pressure:

- 7 Version "QMAG24", "QMBG24", "QMABG24"
- 8 Check valve controlled open via control spool (version "QMAG24", "QMBG24", "QMABG24")

  - **6** Porting pattern according to ISO 4401-05-04-0-05, ISO 4401-05-05-0-05 and NFPA T3.5.1 R2-2002 D05; deviating from ISO 4401, port T is called TA and port T1 is called TB in this data sheet.

Valve mounting screws (separate order)

- 4 hexagon socket head cap screws ISO 4762 M6 10.9
- 4 hexagon socket head cap screws 1/4-20 UNC ASTM A574

## Motice:

The length of the valve mounting screws of the sandwich plate valve must be selected according to the components mounted under and over the isolator valve.

Depending on the application, screw type and tightening torque must be adjusted to the circumstances.

Please ask Rexroth for screws with the required length.

# Inductive position switch type QM: Electrical connection

The electrical connection is realized via a 4-pole mating connector (separate order, see page 11) with connection thread M12  $\times$  1.

Connection voltage:	24 V +30%/-15%, direct voltage				
Admissible residual ripple:	≤ 10%				
Load capacity:	maximum 400 mA				
Switching outputs:	PNP transistor outputs, load between switching outputs and GND				
1 + 4 - GND					
Pinout:	1 +24 V				
4 3	2 Switching output: 400 mA				
70;07	<b>3</b> 0 V, GND				
1 2	4 Switching output: 400 mA				

# **Inductive position switch type QM:** Switching logics

# **Accessories** (separate order)

#### Mating connectors and cable sets

Designation	Version	Short designation	Material number	Data sheet
Mating connectors;	M12 x 1, straight, PG 9	4PZ24	R900031155	08006
